

Tutorial Video Script

Point-by-point script for the screencast - admin side and visitor side

Format: each scene has ON SCREEN (what you record) and VOICEOVER (what you say). Target length 6-7 minutes at normal pace. Say the lines naturally, do not read.

TravelDoor Connect | generated 05 Sep 2026 | internal documentation

BEFORE YOU HIT RECORD

- [] Create a throwaway event named e.g. 'Demo - Bike Show 2026' (delete it after recording)
- [] Have a second browser window (or incognito) ready for the visitor side - do not log out of admin
- [] Prepare a real inbox you can open, to show the confirmation email
- [] Record at 1920x1080, browser zoom 100%, hide bookmarks bar
- [] Slow down mouse movements; pause 1 second after each click (easier to edit)

PART 1 - INTRO (ABOUT 30 SECONDS)

SCENE 1 Welcome + what the app is		0:00 - 0:30
ON SCREEN - Show the login page https://booking.yourcompany.com/accounts/login/ - Log in, land on the Dashboard, let it sit on screen	VOICEOVER <i>"This is TravelDoor Connect - a booking platform for meetings and events. Customers pick a time on a public page, everyone gets automatic confirmation and reminder emails, and the team manages everything from this back office. Let me walk you through both sides, starting as the admin."</i>	

PART 2 - ADMIN SIDE: CREATE A BOOKABLE EVENT (ABOUT 2 MINUTES)

SCENE 2	Dashboard tour	0:30 - 0:50
ON SCREEN - Point at the top navigation: Dashboard, Events, People, Bookings, Notifications, Audit log, Users, Settings - Highlight the stat cards: events, live events, hosts, bookings, flags, failed emails		VOICEOVER "The dashboard is your morning overview - how many events are live, what's booked, and whether anything needs attention. All the tools live in this top bar."
SCENE 3	Create the event	0:50 - 1:20
ON SCREEN - Events -> New event -> choose type: In-person or Online - Fill the form: name, dates, venue or video provider + meeting link - Save -> land on the event page (status: draft)		VOICEOVER "First, create the event. Choose in-person for a venue, or online for a video call - the emails automatically include either the venue details or the join link. For now it is a draft; visitors cannot see it yet."
SCENE 4	Add the team	1:20 - 1:45
ON SCREEN - On the event page -> Team -> add hosts from the People directory - Show a person card: name, role, email, photo - Optional: quickly open People in the top bar to show the directory		VOICEOVER "Next, add the hosts people can meet. The People directory keeps names, roles, photos and emails - reuse them across every event."
SCENE 5	Build the time slots	1:45 - 2:20
ON SCREEN - Slots -> Build slots: pick host, date range, weekdays, start time, duration - Preview the generated slots on the event page - Optional: show skipping a whole day (day calendar toggle)		VOICEOVER "Now the calendar. Instead of adding times one by one, the slot builder generates them for you - pick the host, the date range, the working days, and the meeting length. Need a holiday off? Just skip that day."
SCENE 6	Publish and share	2:20 - 2:40
ON SCREEN - Click Publish -> status changes to LIVE - Copy the public link (/b/bike-show-2026/) - show where it appears		VOICEOVER "One click, and the event is live. This link is what you send to customers - put it in an email, a website, anywhere. Time to switch to the visitor side."

PART 3 - VISITOR SIDE: BOOKING A MEETING (ABOUT 2 MINUTES)

SCENE 7	Open the public page	2:40 - 3:00
ON SCREEN - Second browser window (incognito), paste the public link - Show the event landing page with the hosts and their photos		VOICEOVER "This is what your customers see - no login, nothing to install. They see the event and the people they can meet."
SCENE 8	Pick a host and a time	3:00 - 3:30
ON SCREEN - Click a host -> their calendar of free slots - Pick a day, click a free time		VOICEOVER "Choose who to meet, and the calendar shows only the times that are actually free - double bookings are impossible by design."
SCENE 9	Book it	3:30 - 3:55
ON SCREEN - Fill name + email, confirm - Show the confirmation screen		VOICEOVER "A name and an email is all it takes. The time is now reserved instantly."
SCENE 10	The confirmation email	3:55 - 4:25
ON SCREEN - Switch to the inbox, open the confirmation email - Point at: date and time, host, venue or join link, Google / Outlook calendar buttons - Point at the manage link at the bottom		VOICEOVER "Within seconds this email arrives. It has everything - when, who, where, or how to join the call - plus one-click calendar buttons for Google and Outlook. And this manage link lets the customer change or cancel without contacting us."
SCENE 11	Self-service reschedule + cancel	4:25 - 4:55
ON SCREEN - Open the manage link - Reschedule: pick a new free slot -> confirmation email updates - Then Cancel -> cancellation email arrives, slot becomes bookable again		VOICEOVER "Customers reschedule or cancel on their own. The old slot frees up instantly, and a new email confirms every change. No phone calls, no admin work."

PART 4 - ADMIN SIDE: RUNNING THE DAY (ABOUT 1.5 MINUTES)

SCENE 12	Bookings overview	4:55 - 5:15
ON SCREEN - Bookings in the top bar -> filter list - Open one booking: visitor details, status, resend confirmation button - Point at the CSV export button		VOICEOVER "Back as admin, every booking is here - filterable, exportable to a spreadsheet, and you can resend a confirmation with one click if someone lost the email."

SCENE 13	Attention flags	5:15 - 5:35
ON SCREEN - Remove a host from the event team - Show the booking now flagged 'needs attention' on dashboard / bookings - Click Clear flag VOICEOVER <i>"If a host drops out, affected bookings raise a red flag on the dashboard - so you can call the customer and rebook, then clear the flag. Nothing slips through."</i>		
SCENE 14	Notifications log + reminders	5:35 - 5:55
ON SCREEN - Notifications screen: every email logged (sent / failed + error) - Back on dashboard: point at 'background jobs' heartbeat and email status VOICEOVER <i>"Every email the system sends is logged here - and if one fails, it retries automatically. The background worker also sends reminder emails before each meeting, twenty-four hours and one hour by default."</i>		
SCENE 15	Settings + users	5:55 - 6:20
ON SCREEN - Settings: company name, public URL, SMTP mail block (mention the Send test email button) - Users: create an admin -> mention the welcome email with a one-time password VOICEOVER <i>"Mail runs on your own SMTP account, configured here - no developer needed. And you invite colleagues as admins from the Users screen; they receive their login details by email and set their own password."</i>		
SCENE 16	Outro	6:20 - 6:40
ON SCREEN - Audit log: one line per action, who did what - Back to dashboard, end on the overview VOICEOVER <i>"Everything admins do is recorded in the audit log. That's the whole loop - publish an event, share one link, and the bookings, emails and reminders run themselves. Thanks for watching."</i>		

RECORDING TIPS

Tip	Why
Record admin and visitor parts in separate clips	easier to reorder; incognito = clean visitor view
Do each scene 2-3 times, keep the best take	voiceover sounds more natural when relaxed
Zoom the browser (Ctrl +) to 110% while recording	text stays readable after video compression
Blur real customer names/emails in post	privacy
Record voiceover AFTER the screen capture	you can pace it to the edits, re-record fluffed lines
